

# Tuberculosis Resources

## Healthcare Facility Tuberculosis Risk Assessment

All healthcare facilities should annually assess their tuberculosis risk. A facility’s risk can be assessed by using the Center for Disease Control and Prevention (CDC)’s “[Guidelines for Prevention the Transmission of Mycobacterium tuberculosis in Health-Care Settings](#)”.

Included in the guidelines is the [risk assessment worksheet](#) (Appendix B.) that contains questions that will determine the facility’s risk classification. The risk classifications can be found in Appendix C, with screening recommendations.

## Tuberculosis Incidence Rates for Use in Risk Assessments

Area	Rate per 100,000 Population	
	2023	2024*
Health District 3	0.6	1.16
Idaho	0.8	1.1
National	2.9	3.0

Note:

- \*2024 data is provisional
- Rates are calculated using July 1, 2024 population estimates retrieved from <https://www.census.gov/data/tables/time-series/demo/popest/2020s-counties-total.html>.
- Idaho and National data can be found at <https://www.gethealthy.dhw.idaho.gov/tuberculosis>.

## Additional Resources

For additional Idaho data and information, review the [Annual TB Surveillance Report](#) published by the Division of Public health, Idaho Department of Health and Welfare.
