Healthcare Facility Tuberculosis Risk Assessment

All healthcare facilities should annually assess their tuberculosis risk. A facility’s risk can be assessed by using the Center for Disease Control and Prevention (CDC)’s “[Guidelines for Prevention the Transmission of Mycobacterium tuberculosis in Health-Care Settings](#)”.

Included in the guidelines is the [risk assessment worksheet](#) (Appendix B.) that contains questions that will determine the facility’s risk classification. The risk classifications can be found in Appendix C, with screening recommendations.

Tuberculosis Incidence Rates for Use in Risk Assessments

<i>Area</i>	Rate per 100,000 Population	
	2024	2025*
<i>Health District 3</i>	1.16	1.98
<i>Idaho</i>	1.10	0.80
<i>National</i>	3.10	3.00

Note:

- *2025 data is provisional and subject to change
- Rates are calculated using July 1, 2025 population estimates retrieved from <https://www.census.gov/data/tables/time-series/demo/popest/2020s-counties-total.html>.
- Idaho and National data can be found at <https://www.getthehealthy.dhw.idaho.gov/tuberculosis>.
